

Celebrating 35 years in Ireland

Dublin, Ireland 9th September 2016

This year Mitsubishi Electric proudly marks its 35th year in Ireland. Over the 35 years Mitsubishi Electric has gone from strength to strength and we are proud to reaffirm our commitment to leading the way in Ireland. We have recently invested in a purpose built installation for product training, display and product solution testing. This demonstration area will allow us work with our partners and customers across both our Factory Automation and our Living Environmental Systems divisions. Factory Automation customers will benefit from our double robot cell, containing both an articulated arm and SCARA robot, along with the new innovative modular wall product display. Living Environmental Systems customers will receive practical, hands-on experience from our key product installations across air conditioning systems and Ecodan heat pumps.

As a global, leading green company, we are applying our technologies to contribute to society and daily life, in Ireland and around the world, sharing visions of a better tomorrow. In Ireland we are leading the field in Living Environmental Systems and Factory Automation, from innovative air conditioning and Ecodan domestic heat pumps to advanced robotics and automation products.

Mitsubishi Electric is a world leader in air conditioning systems for residential, commercial and industrial use. Challenged to create air conditioning systems that provide exemplary performance in the wide-ranging climatic conditions found throughout Japan, our engineers develop amazingly sophisticated yet durable units and systems capable of constant use under virtually any natural climatic condition on Earth. Each product is an amazing engineering feat in its own right, delivering years of quiet operation, energy-efficient performance and minimum impact on the environment.

In the area of Factory Automation, we offer an extensive range of automation and

processing technologies, including controllers, drive products, power distribution, visualization and a vast line up of robotics. Along with developing products to suit our customers' needs, we apply our advanced engineering techniques to provide cutting edge, reliable solutions for any manufacturing or automated process. Our solutions and products help bring higher productivity—and quality—to users in all industries.
